

# Case study success story

Insurance company – simple data-centre print queue management

## The requirement

- An Insurance company with month end business applications producing very large numbers of small 1 or 2 page print jobs in PCL format required a simple to use software front end to manage the output of jobs to multiple printers in a time critical month end print window.

PCL  
data

Month end  
time critical print runs  
with need to manage  
thousands of small jobs

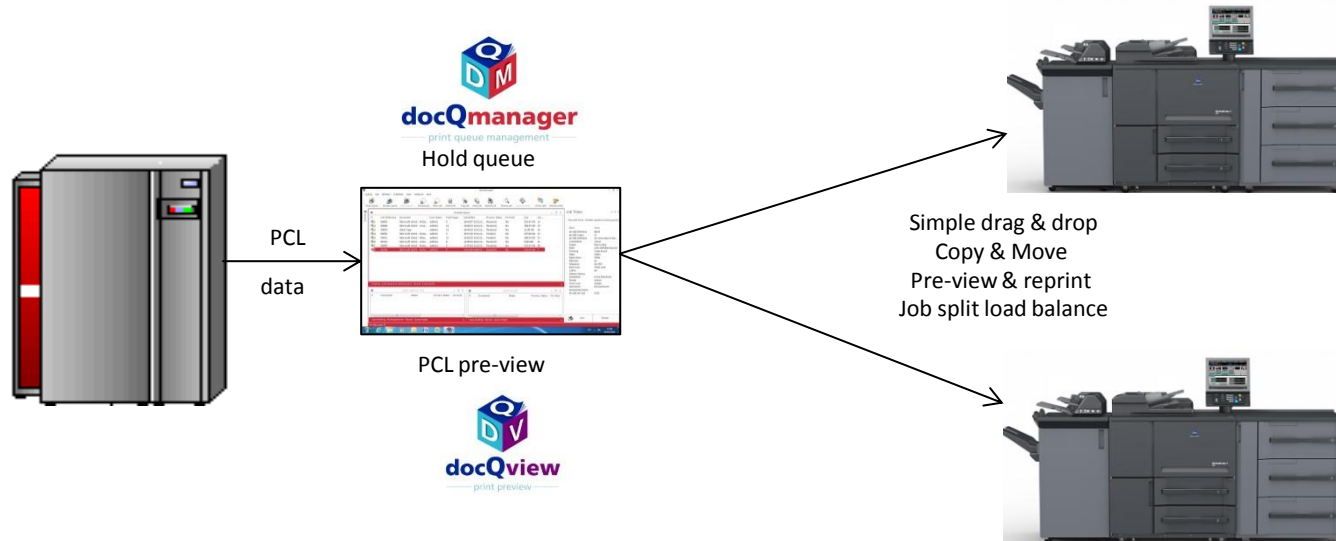

# Case study success story

Insurance company – simple data-centre print queue management

## The solution

- docQmanager was installed along with the docQview module enabling preview of the PCL encoded jobs. Print room operators can preview jobs as required and simply highlight and select blocks of jobs to drag & drop them to the chosen printer queue or split them across multiple devices to load balance and optimise output.

## Benefits

- Enhanced flexibility and productivity of operations to meet the critical month end print window.
