# Case study success story

Workers' union - special data-centre print workflow with archiving

The requirement

- A worker's union required output management of host system PCL data to two high volume production devices. Workflow required the ability to move jobs between printer, page range reprint, and for certain large jobs to be broken down into separate 50 page jobs and held for manual release one at a time to the printer of choice. All jobs were to be held for potential reprint in a temporary archive for 10 days before automatic conversion to PDF for permanent archive in a document management system.
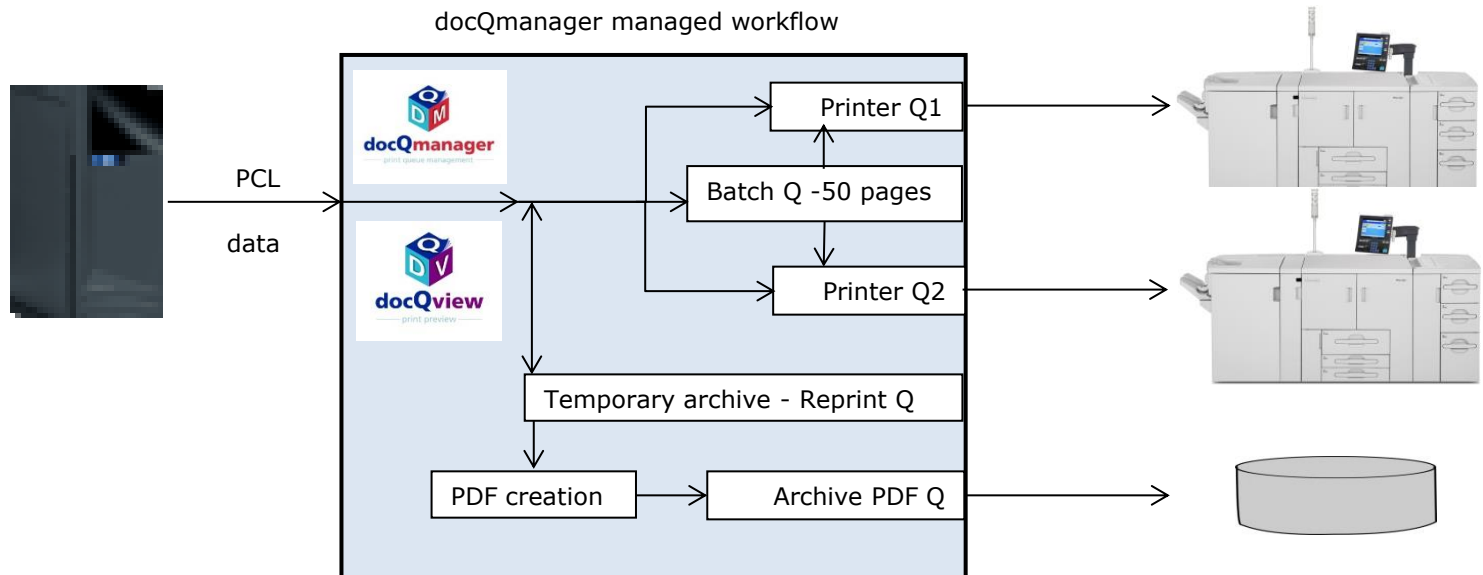

PCL

data

Printer Q1

Batch Q - 50 page jobs

Printer Q2

10 day temporary archive

Archive PDF

Case study success story

Worker's union - special data-centre print workflow with archiving

The solution

- docQmanager along with docQview PCL was installed and configured with custom scripting to provide the necessary detailed workflow, while some automated integration with third party PCL to PDF conversion software completed the permanent archive requirement.

docQmanager managed workflow

PCL

data

- docQmanager
- docQview
- Printer Q1
- Batch Q -50 pages
- Printer Q2
- Temporary archive - Reprint Q
- PDF creation
- Archive PDF Q

Benefits

- Enhanced print room automation and productivity.
